TeraBox Cloud Storage Platform

Introduction:

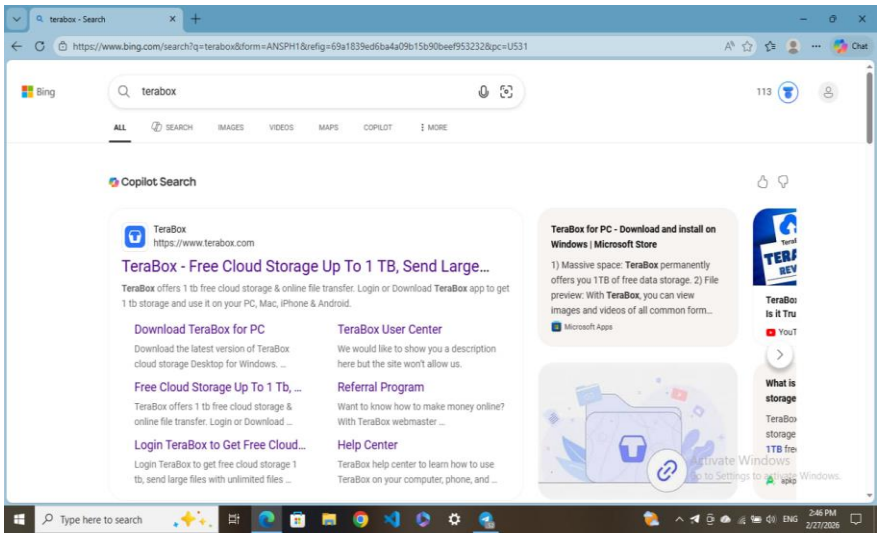
TeraBox is a cloud storage service owned by Flextech Inc. (based in Japan), which is part of a larger group of major technology companies.

History: The platform originally launched in 2020 under the name "Dubox." It was rebranded to TeraBox in 2021 to solidify its identity as a platform that offers a full "terabyte" of storage for free.

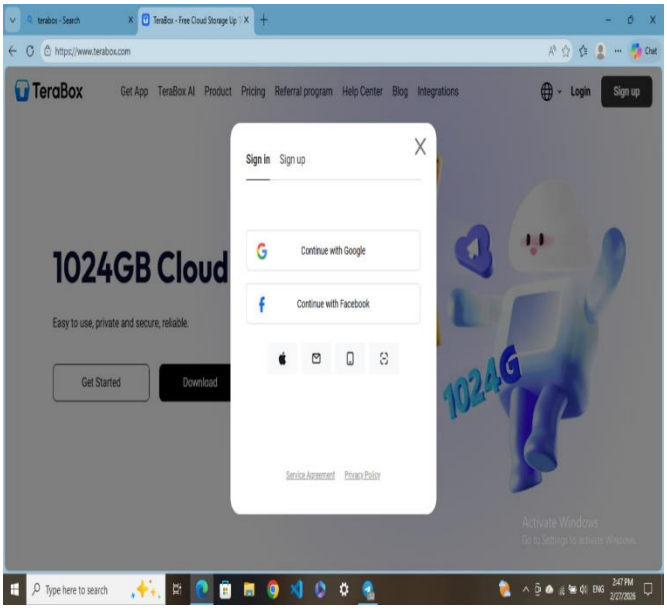
Objective: To provide massive storage space for everyday users struggling with full phone memory due to photos and videos.

Usage steps :

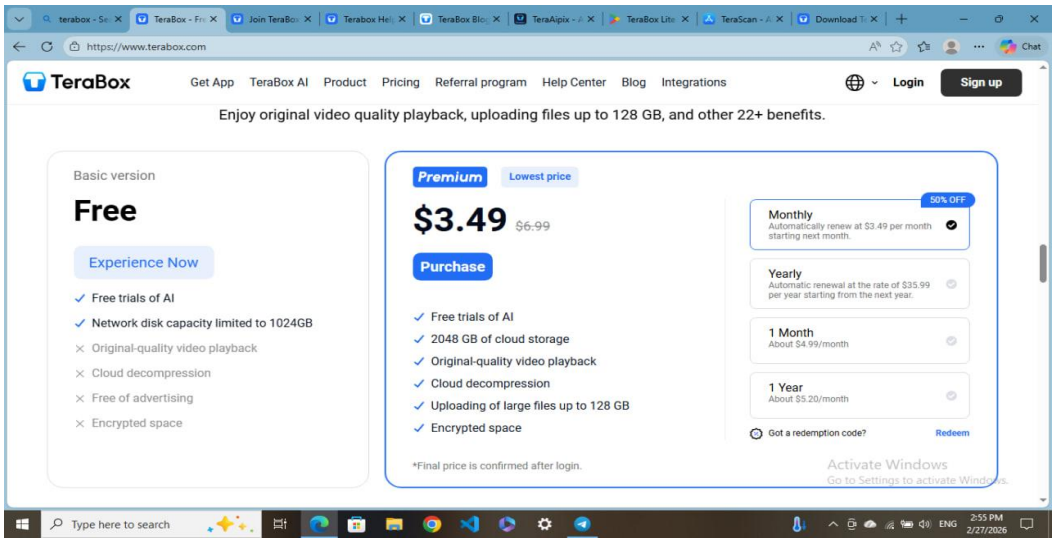
1- Access the platform by typing the site name into the browser.

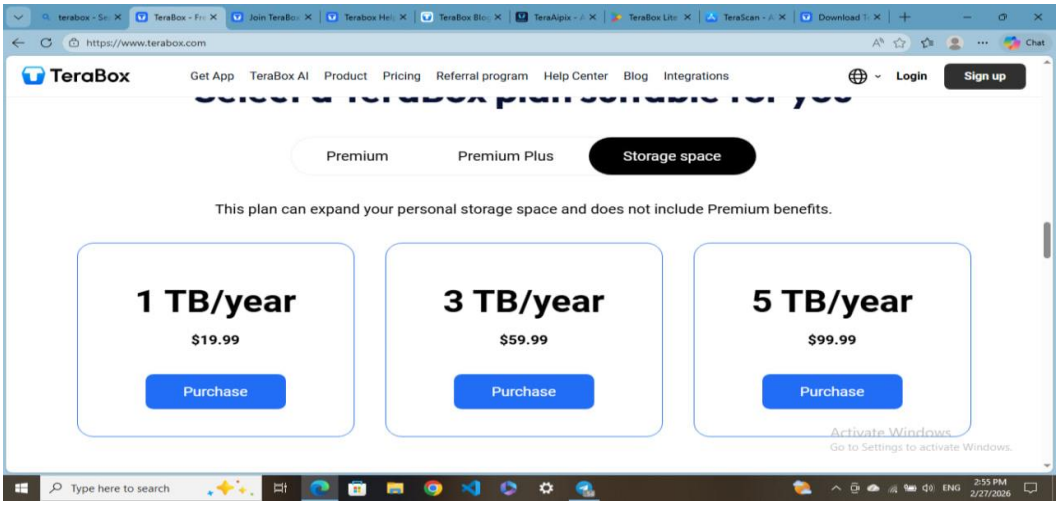


2- Access the platform by creating an account or logging in.



3- The platform contains offers that suit users.

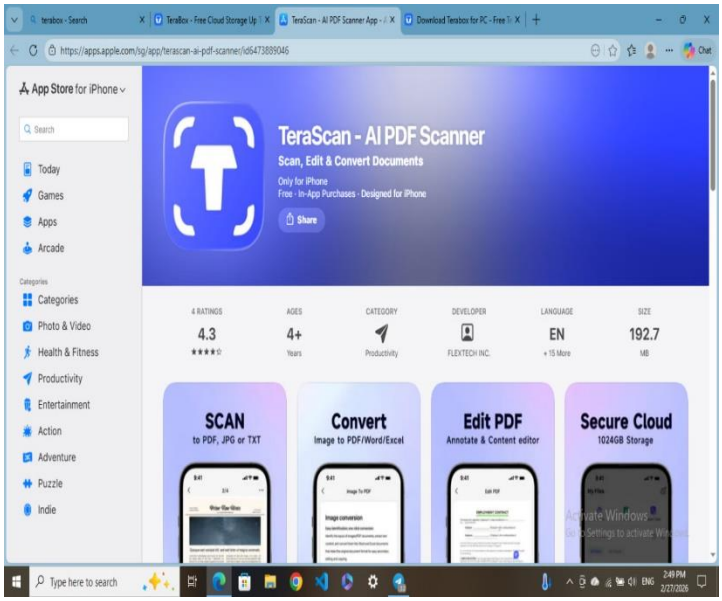


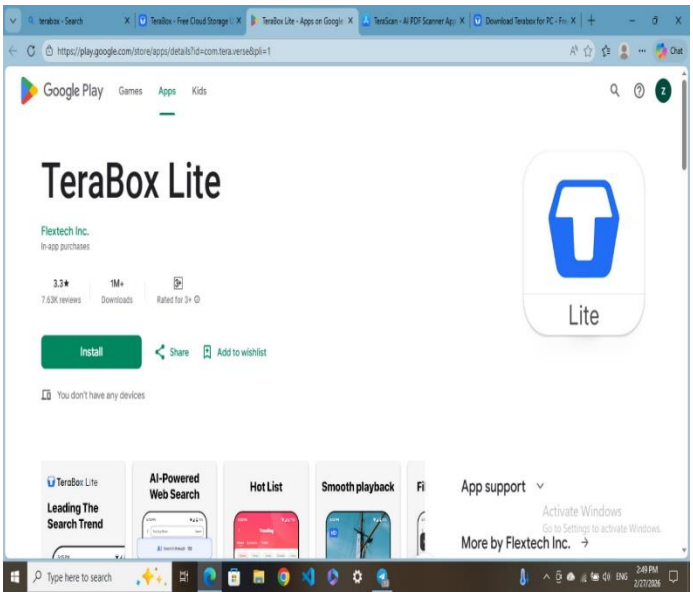


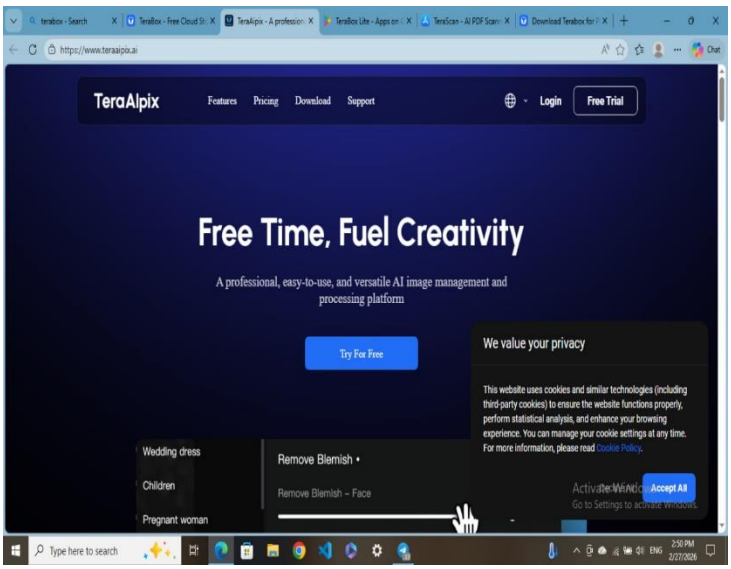
4- High Safety.

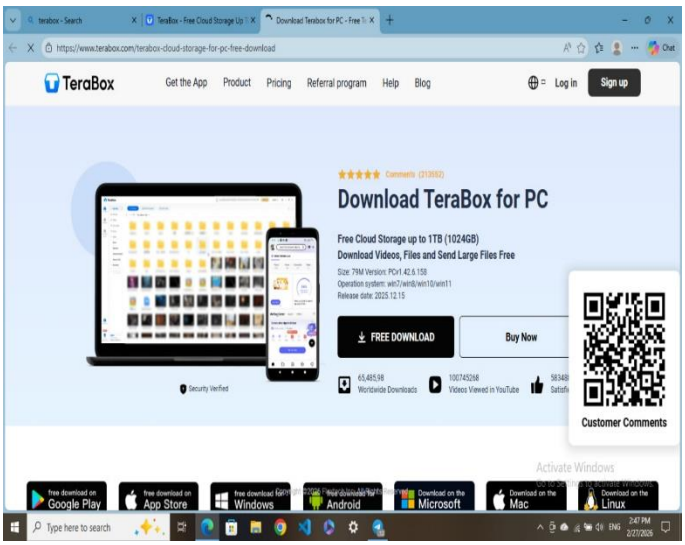
5- the platform has multiple applications , including

- TeraScan
- TeraAlpix
- TeraBox lite
- TeraBox for BCs









Features:

1) Largest Free Space Globally: It grants you 1024 GB (1 TB) for free upon registration, which is equivalent to approximately 300,000 photos.

2) Automatic Backup: The app can automatically upload photos and videos from your phone as soon as they are captured (this can be toggled on or off).

3) Large File Sharing: You can send links for files up to 4 GB in the free version (and up to 20 GB in the paid version).

4) Safe Box: A dedicated section protected by an additional password for storing highly sensitive files.

5) Built-in Media Player: You can watch stored videos directly within the app in high quality without needing to download them to your device.

Common Uses:

1) Freeing Up Phone Space: Moving old photos and videos from the phone to the cloud and deleting them from the local device memory.

2) Storing Games and Software: Due to the vast space, many users use it to save large game files and installers.

3) Sharing Movies and Series: It is very popular in media-sharing communities because of its easy-to-use links.

Drawbacks:

1) Advertisements: The free version relies on displaying ads within the app to fund the massive storage space provided.

2) Download Speed: In the free version, you may find that speeds are somewhat limited compared to competitors like Google Drive or MEGA.

3) Privacy: While the company emphasizes security, it does not offer "End-to-End Encryption" like MEGA; therefore, it is not recommended for storing "top secret" or official government documents.

4) Frequent Notifications: The app sends many alerts attempting to persuade users to upgrade to the paid premium version.
